* Forecast is consistent when observed and predicted (tercile with the highest probability) categories coincide (are in the same tercile).

Forecast is near-consistent when observed and predicted (tercile with the highest probability) differ by only one category (i.e. terciles 1 and 2 or terciles 2 and 3).

Forecast is inconsistent when observed and predicted (tercile with the highest probability) differ by two categories (i.e. terciles 1 and 3).

Summary Statements

Rainfall for January 2016:

With the exception of Nadi Airport, which had *normal* rainfall, *below normal* rainfall was recorded at all other stations.

The rainfall at Rotuma ranked second driest January on record, with third driest at Nausori Airport and fifth driest at Tokotoko.

Accumulated rainfall for November 2015 to January 2016 & outlook verification:

Rainfall over the last three months was *below normal* across the country.

The total rainfall at Labasa Airport through the November 2015 to January 2016 period ranked fifth driest in the historical record.

Verification of the 3-month rainfall

The SCOPIC outlooks for the last three months were consistent at 10 stations and near-consistent at 1 station (Laucala Bay). The outlook for Vunisea and Nabouwalu could not be verified due to missing data.

Outlooks for March to May 2016:

1. SCOPIC:

The seasonal rainfall outlook for March to May 2016 shows:

- *Below normal* rainfall favoured over majority of the places, with *normal* the next most likely outcome;
- The outlook for Rotuma does not provide any clear guidance, as there is almost equal chances of *below normal*, *normal* and *above normal* rainfall;
- The outlook confidences range from *moderate* to *good* in the Western, Eastern and Northern Divisions, while the confidences range from *very low* to *low* in the Central Division and at Rotuma.

2. POAMA:

POAMA model favours *below normal* rainfall at all the stations.

NB: The X LEPS % score has been categorised as follows:

Very Low: $X < 0.0$

Low: $0 \leq X < 5$

Moderate $5 \leq X < 10$

Good: $10 \leq X < 15$

High: $15 \leq X < 25$

Very High: $25 \leq X < 35$ Exceptional: $X \geq 35$
