Period: \*below normal/normal/above normal

Predictors and Period used for April 2017 to June 2017 Outlooks (refer to OCOF #114):  
2-month NINO3.4SSTA (January to February 2017)

\* Forecast is consistent when observed and predicted (tercile with the highest probability) categories coincide (are in the same tercile).  
Forecast is near-consistent when observed and predicted (tercile with the highest probability) differ by only one category (i.e. terciles 1 and 2 or terciles 2 and 3).  
Forecast is inconsistent when observed and predicted (tercile with the highest probability) differ by two categories (i.e. terciles 1 and 3).

## **Summary Statements**

### **Rainfall for June 2017:**

#### Majuro

Normal rainfall

#### Kwajalein

Above normal rainfall

### **Accumulated rainfall for April to June 2017, including outlook verification:**

#### Majuro

Normal rainfall, with near-consistent verification.

#### Kwajalein

Below normal rainfall, with inconsistent verification.

### **Outlooks for August to October 2017:**

#### **1. SCOPIC:**

##### Majuro

The outlook shows a near-equal likelihood of below-normal rainfall and normal rainfall; the least likely is above normal.

##### Kwajalein

Normal rainfall is the most likely outcome, with below-normal the next most likely. The least likely outcome is above-normal.

Low to very low forecast skills

#### **2. POAMA:**

Below-Normal rainfall is favoured at both Majuro and Kwajalein.
