Period: \*below normal/normal/above normal

\* Forecast is consistent when observed and predicted (tercile with the highest probability) categories coincide (are in the same tercile).  
Forecast is near-consistent when observed and predicted (tercile with the highest probability) differ by only one category (i.e. terciles 1 and 2 or terciles 2 and 3).

Forecast is inconsistent when observed and predicted (tercile with the highest probability) differ by two categories (i.e. terciles 1 and 3).

## **Summary Statements**

### **Rainfall for June 2013:**

Nadzab received normal rainfall and Misima received below normal rainfall whilst the rest of the country received above normal rainfall.

### **Accumulated rainfall for April–June 2013, including outlook verification:**

Momase region received above normal rainfall whilst New Guinea Islands and Southern received normal rainfalls. The forecasts were consistent to near consistent except Nadzab being inconsistent. The skills were very low to high.

### **Outlooks for August–October 2013:**

#### **1. SCOPIC:**

Momase and Southern region favours above normal rainfall whilst New Guinea Islands and Madang in Momase favours normal rainfall. Confidence is very low to very high.

#### **2. POAMA:**

The model favours **normal** for Wewak and **above normal** for Port Moresby.

**NB: The X LEPS % score has been categorised as follows:**

Very Low:  $X < 0.0$

Low:  $0 \leq X < 5$

Moderate  $5 \leq X < 10$

Good:  $10 \leq X < 15$

High:  $15 \leq X < 25$

Very High:  $25 \leq X < 35$

Exceptional:  $X \geq 35$
