Port Moresby (1875-2013)	53.4	41.4	86.2	66.6	44/103	32/24/ 44 (-0.6)	Near Consistent

Period:*below normal/normal/above normal

Forecast is <u>consistent</u> when observed and predicted (tercile with the highest probability) categories coincide (are in the same tercile).

Forecast is <u>near-consistent</u> when observed and predicted (tercile with the highest probability) differ by only one category (i.e. terciles 1 and 2 or terciles 2 and 3).

Forecast is <u>inconsistent</u> when observed and predicted (tercile with the highest probability) differ by two categories (i.e. terciles 1 and 3).

TABLE 4: Seasonal Climate Outlooks using POAMA2 for November –January 2014

Station	Lower Tercile (prob)	33%ile rainfall (mm)	Middle Tercile (prob)	66%ile rainfall (mm)	Upper Tercile (prob)
Momase Region					
Madang	17	960	56	1,116	27
Wewak	40	427	33	506	27
New Guinea Islands					
Momote	17	720	33	888	50
Kavieng	23	767	30	942	47
Southern Region					
Misima	24	553	43	738	33
PortMoresby	13	272	50	411	37

Summary Statements:

Rainfall for Septmber 2013:

Below Normal to **Above Normal** rainfall across the country except Kavieng received **Normal** rainfall.

Accumulated rainfall for July-September 2013, including outlook verification

During the last three months rainfall received was **Normal** to **Above Normal** except Misima received **Below Normal** Rainfall.

The forecasts were Consistent for Momase & New Guinea Islands whilst Southern was Near Consistent. The skills ranged from very low to exceptional.

Outlook for November - January 2014:

1. SCOPIC:

The model favours **Below** *Normal* to **Above Normal** rainfall for the three regions with very low to very high skills.

2. POAMA Model

The model favours *Normal* to *Above Normal* for most of the country except Wewak with *Below Normal* rainfall.

NB: The X LEPS % score has been categorised as follows:

Very Low: X < 0.0Low: $0 \le X < 5$ Moderate $5 \le X < 10$ Very High: $25 \le X < 35$ Exceptional: $X \ge 35$

 $Good: 10 \leq \ X < 15 \quad High: 15 \leq X < 25$
