Period: *below normal/normal/above normal

Predictors and Period used for September to November 2013 Outlooks (refer to OCOF #71): 3 months SSTa's 1 and 9 from May to July 2013

* Forecast is consistent when observed and predicted (tercile with the highest probability) categories coincide (are in the same tercile).

Forecast is near-consistent when observed and predicted (tercile with the highest probability) differ by only one category (i.e. terciles 1 and 2 or terciles 2 and 3).

Forecast is inconsistent when observed and predicted (tercile with the highest probability) differ by two categories (i.e. terciles 1 and 3).

Summary Statements

Rainfall for November 2013:

Beru and Butaritari stations recorded *normal* rainfall.

Kanton and Kiritimati stations recorded *above normal* rainfall.

Tarawa station recorded *below normal* rainfall.

Accumulated rainfall for September–November 2013, including outlook verification:

Beru and Tarawa stations recorded *normal* rainfall. Both, Near-consistent

Kanton and Kiritimati stations recorded *above normal* rainfall. Kanton Near-consistent, Kiritimati Inconsistent.

Outlooks for January-March 2014:

1. SCOPIC:

Beru, Butaritari, Kanton and Kiritimati stations favour *below normal* rainfall.

Tarawa favours below normal to normal rainfall with equal chance.

2. POAMA:

Tarawa favours normal to above normal rainfall with equal chance.

Tabuaeran favours *above normal* rainfall.

Kanton favours *below normal* rainfall.

NB: The X LEPS % score has been categorised as follows:

Very Low: $X < 0.0$

Low: $0 \leq X < 5$

Moderate $5 \leq X < 10$

Good: $10 \leq X < 15$

High: $15 \leq X < 25$

Very High: $25 \leq X < 35$

Exceptional: $X \geq 35$
