Period: \*below normal/normal/above normal

Predictors and Period used for July to September 2014 Outlooks (refer to OCOF #79):  
**Nino 3.4 value from March to May 2014**

\* Forecast is consistent when observed and predicted (tercile with the highest probability) categories coincide (are in the same tercile).

Forecast is near-consistent when observed and predicted (tercile with the highest probability) differ by only one category (i.e. terciles 1 and 2 or terciles 2 and 3).

Forecast is inconsistent when observed and predicted (tercile with the highest probability) differ by two categories (i.e. terciles 1 and 3).

## Summary Statements

### Rainfall for September 2014:

-All stations recorded '**below normal**' rainfall.

### Accumulated rainfall for July to September 2014, including outlook verification:

-Afiamalu and Faleolo stations recorded '**normal**' rainfall whereas '**below normal**' rainfall recorded for Apia and Nafanua.

-The Afiamalu and Faleolo three-month rainfall was '**near consistent**' with the July to September outlook. Nafanua was '**consistent**' and Apia recorded '**inconsistent**'.

### Outlooks for November 2014 to January 2015:

#### 1. SCOPIC:

- The outlook for Apia and Faleolo stations offer little guidance for the coming season as the chances of '**above-normal**', '**normal**' and '**below-normal**' rainfall are similar.
- '**Normal**' rainfall is forecast for Nafanua stations with '**below normal**' the next most likely.
- At Afiamalu there is a near equal likelihood of below normal or normal rainfall
- The confidence of the model outlook is '**moderate**' at Afiamalu and Apia, '**high**' at Nafanua and '**very low**' at Faleolo station.

#### 2. POAMA:

- '**Above normal**' is favoured for Apia for November 2014 to January 2015 period.

**NB: The X LEPS % score has been categorised as follows:**

Very Low:  $X < 0.0$

Low:  $0 \leq X < 5$

Moderate  $5 \leq X < 10$

Good:  $10 \leq X < 15$

High:  $15 \leq X < 25$

Very High:  $25 \leq X < 35$

Exceptional:  $X \geq 35$
